Figure 1. Logic model representing Durbar intervention component development and targeted outcomes.

Durbar / Sonagachi Intervention Components [a]

Rapid Appraisal [b]
- Community Mapping
- Stakeholder Analysis
- Risk Behavior Survey
- Identify Sex Worker Leaders

STD/HIV Intervention Project (SHIP) [b]
- Diagnosis & Treatment
- Peer Health Education
- Condom Social Marketing
- Treatment Follow-Up

DMSC Sex Worker Organization
- Establish Local Chapter
- Elect Local Officers
  President, V.P., Secretary, Treasurer
- Raise Consciousness
- Meetings & Street Rallies
- Slogans & Songs
  "Sex work is valid work!"
  "We deserve workers rights!"

Stakeholder & Power Broker Advocacy by SHIP & DMSC
- Politicians & Political Clubs
- Media & Community Education
- Police
- Landlords
- Madams & "Pimps"
- Gangs & Hoodlums
- Partners/Husbands

USHA Multi-Purpose Micro-Finance Cooperative
- Secure savings and lending
- Reduce theft and extortion
- Sex Worker Field "Tellers"
- Encourage Saving
- Micro–Enterprise Loans
  -Tailor, Crafts, Taxi, Agriculture

Empowerment Outcome Domains & Measures in Replication Study

HIV/STI Prevention
- Know at least one STI
- Condoms Prevent STIs
- Condoms Prevent AIDS
- At risk for HIV/STIs
- Condom use [c]

Sex Worker Consciousness
- Sex work is valid work
- Want more education/training
- Ever disclosed profession
- Helped other sex workers

Workplace Autonomy & Negotiation
- Most important condom decision-maker
- Can refuse client for any sex act
- Ever refused for no condoms
- Can take leave if sick or unwilling
- Can change work contract

Mobility & Association
- Visited with Sex Workers outside work
- Participated in social functions

Political Participation
- Voted last election
- Voted willingly

Financial Security
- Save money
- Have other income
- Work other places
- Take loans

[a] The sequence of intervention components reflects their evolution in Durbar's development and implementation in replications.
[b] Rapid appraisal and SHIP were implemented in the control community as standard care in the replication trial.
[c] Condom use increases were examined in Basu et. al., 2004.
