2022 HIV Next Generation Conference
Theme: Implementation Science for HIV Prevention and Treatment to End the Epidemics.
Friday, December 2, 2022, 9:00am – 12:15pm PT

Zoom Link: https://uclahs.zoom.us/meeting/register/tJMqc-2vqzooHdxs0T0zSGe52UBkDvdH8z5a

POSTER PRESENTATIONS (10:40AM)

Poster numbers are assigned according to the list below.

1. **Presenter(s):**
   - Gabriel Edwards, MD, MPH, Associate Project Scientist, Department of General Internal Medicine and Health Services Research, UCLA David Geffen School of Medicine

   **Presentation Title:** Mobile Enhanced Prevention Support: App Design for People Leaving Jail

   **Presentation Summary:** This is a project which received funding as part of the CHIPTS 2022 Mentored Pilot Grant Program. It focuses on a population at high risk for HIV - sexual and gender minorities with a recent history of incarceration and substance use, and aims to gather qualitative data on the way the population engages with mobile technology to address health and social needs. We use an implementation science framework centering around health equity to guide data collection.

2. **Presenter(s):**
   - Khadesia Howell, MPH, RAND Corporation, Doctoral Student, Pardee RAND Graduate School

   **Presentation Title:** A ‘Think Aloud’ Qualitative Study to Improve Coping with Discrimination and Reduce Health Disparities among Black Sexual Minority Men

   **Presentation Summary:** ‘Think Aloud’ is a processes can add depth to the quantitative and qualitative research and gives dimension to thought processes and behavioral responses. There are a variety of studies looking at Black sexual minority men and intersectionality’s impact on mental health and stigma; however, they do not combine ‘Think Aloud’ with self-reported discrimination for a better understanding of the impact of discrimination and stigma on mental health and coping mechanisms.

3. **Presenter(s):**
   - Aliaa Ibinidris, PhD, Postdoctoral Research Fellow, Neuroscience Institute, Department of Psychiatry and Mental Health, University of Cape Town
Presentation Title: Association of combined antiretroviral therapy with altered brain function and cognition dysfunction in people with HIV

Presentation Summary: Neurocognitive impairment in later stages of HIV is common and still occurs even in controlled HIV infections with combined antiretroviral therapy (cART). This project aims to look at the association between being on cART with brain function as well as with cognitive performance in people with HIV

4. Presenter(s):
   – Ricardo Mendoza Lepe, PhD, Bilingual Research Coordinator, Bienestar Human Services

Presentation Title: Desde su Persectiva: Inclusivity and Research Community Advisory Boards in Transgender Research

Titulo: Desde su Perspectiva: Inclusividad y Juntas Comunitarias de Asesoría en la Investigación sobre Transexualidad

Presentation Summary: Meetings to improve research about their communities, learn and be part of their research, learn about research development, and create inclusive and trusted programs for the transgender community.

Resumen: Reuniones para mejorar la investigación sobre sus comunidades, aprender y formar parte de su investigación, desarrollo de investigación, y crear programas inclusivos y de confianza para la comunidad transgénero.

5. Presenter(s):
   – Amanda P. Miller, MS, PhD, Postdoctoral Fellow, San Diego State University-University of California San Diego (Joint T32 program)

Presentation Title: Evaluating the relationship between hazardous alcohol use and intimate partner violence and PrEP use in pregnant and breastfeeding women at high risk of HIV in Cape Town, South Africa

Presentation Summary: HIV, perinatal alcohol use and intimate partner violence (IPV) represent a syndemic that produces a tremendous public health burden for both mother and fetus in South Africa. Contextualizing drivers of alcohol use and risk factors for IPV among pregnant and breastfeeding women and how alcohol use, IPV victimization and other social determinants of health experienced by South African women influence decision making around PrEP use will provide critical insight into potential points of intervention to address these intersecting health issues. We qualitatively explored these themes among pregnant women at high risk of HIV infection who report using alcohol and/or experiencing intimate partner violence during pregnancy.

6. Presenter(s):
   – Bret Moulton, MPH, Supervising Epidemiologist, Los Angeles County Department of Public Health, Division of HIV and STD Programs
**Presentation Title:** “Ending the HIV Epidemic” in Los Angeles County: HIV Diagnoses Among Clients Utilizing Free, Mailed HIV Self-Test Kits

**Presentation Summary:** As an emerging strategy to expand HIV testing availability, self-testing can expand screening access to persons who might experience barriers to accessing health care. Since 2020, Los Angeles County has provided free HIV self-test kits through the mail to targeted residents. One-third of people who ordered a kit reported never testing for HIV before, and 1.1% of participants had an HIV diagnosis within one year.

7. **Presenter(s):**
   - Jada Williams, BS, Graduate Student, UCLA Division of Population Behavioral Health

**Presentation Title:** Experiences of the COVID-19 Pandemic Among Queer Black Men in Los Angeles: Reflections from a Virtual Listening Session

**Presentation Summary:** The CFAR Health Disparities Core convened a virtual listening session with queer Black men living in Los Angeles to describe the meanings of a shared lived experience, as well as the situations, conditions, and contexts that are part of the lived experience of participants. The current study was designed to better understand the experiences of queer Black men, including experiences associated with their sexual minority and race or racialized identities during the COVID-19 pandemic.

8. **Presenter(s):**
   - Jocelyn Limas, BSc, Graduate Student Researcher, UCLA Fielding School of Public Health - Epidemiology, UCLA Semel Institute Center for Community Health

**Presentation Title:** Barriers to PrEP initiation among at-risk youth in Los Angeles and New Orleans.

**Presentation Summary:** HIV PrEP uptake among adolescents and young adults remains low, prompting research and interventions to address barriers to PrEP initiation with a focus on expanding PrEP awareness and knowledge. In this analysis, data from a study of the Adolescents HIV Medicines Trial Network (ATN 149) was used to identify other underlying and often overlooked barriers to PrEP initiation amongst this population and how these barriers changed over time.

9. **Presenter(s):**
   - Reshmi Mukerji, MPH, Graduate Student, University College London, Institute for Global Health

**Presentation Title:** Qualitative study of intersectional stigma of HIV and other marginalized identities among women living with HIV in India

**Presentation Summary:** Women living with HIV carry a disproportionate burden of HIV stigma, especially in countries where gender discrimination is rampant. Women who have additional marginalized identities often experience worsened violence as a result of
multiple stigmas. The nature of this violence can be temporal in nature, as there is a reduction in enacted and internalised stigma over time.

10. Presenter(s):
   – Ali Mhunug, PhD Student, School of Health Sciences University of Dundee

Presentation Title: Adult Girls and Young Women’s experiences of HIV in the context of patriarchal culture in Murewa, Zimbabwe

Presentation Summary: This presentation presents the personal, relational and social experiences of living with HIV amongst the adolescent girls and young women (AGYW). The results of this study indicated that despite being disfranchised by HIV, AGYW demonstrated agency and resilience.

11. Presenter(s):
   – Antwan De’Sean Matthews, BSc, Director Of Youth Programs, Code Tenderloin

Presentation Title: Code Tenderloin Empowering Black Youth Program Provides Incentives And Resources to Address Health Disparities in San Francisco, CA.

Presentation Summary: Throughout this workshop, the audience will learn how Nonprofits can effectively provide resources and solutions for the communities they serve through program implementation. Through the EBY program process, students are incentivized to participate in the development of the program by providing financial opportunities throughout the 16 weeks. With a diverse funding source, EBY 2022 cohort funded ten interns at $8,000 per student and three fellows at $10,500 per student. Audience members will have learned by the end of the presentation how to develop effective programs through advocacy and program development and implementation to help address health disparities in their communities.

12. Presenter(s):
   – Vanessa R. Warri, MSW, PhD Student, UCLA Department of Social Welfare, Luskin School of Public Affairs, Center for the Study of Women

Presentation Title: Towards Justice-Centered Futures in Transgender Research: Community-Driven Insights for Repairing and Forging Stronger Academic and Community Relations.

Presentation Summary: Robust safeguards against exploitative or harmful research practices related to transgender, gender-expansive, and intersex (TGI) communities have not yet fully been articulated, much less systematically implemented in institutional settings. This presentation offers reflective insights from phase one qualitative interviews of an ongoing collaboration between research universities and TGI communities in California to examine research priorities, ethical considerations, and opportunities to foster greater relationships among TGI and academic research communities.
