A Behavioral Science Agenda for HIV Therapeutics

Robust ART regimens have transformed the lives of those living with HIV, although many still struggle with the need for indefinite, daily pill ingestion. Novel strategies, including long-acting formulations for prevention and treatment, may further improve the lives of persons living with HIV, particularly those “hardly reached” with current regimens. Research on the acceptability, effectiveness, and implementation of novel therapeutics requires the incorporation of rigorous behavioral and social science methods, which will be overviewed in this presentation.

Event Information
This is a hybrid presentation

In-person Details:
Venue: CHS 23-105 (CHS Building Room 105, Floor 2, Corridor 3)
A light lunch will be provided with RSVP

Virtual Information:
Zoom meeting ID: 910 6153 8225
or call in using phone #: +1(669) 900-6833

May 16, 2023
11:00am - 12:00pm PT
