A Regional Response to Ending the HIV Epidemic: A View from the California HIV/AIDS Research Program (CHRP)

Andrew D. Forsyth, Ph.D.
University of California, Office of the President

Los Angeles, California January 24, 2020

What does CHRP do?

- Established 1983
- 2,000+ research projects on HIV
- ~\$300 million for basic, prevention, and treatment
- Unrestricted, designated State funds
- Receives strong support from legislators and advocates
- FY2019 Budget: \$8.75M

CHRP Strategic Plan: FY20 and Beyond

Vision: Helping to achieve HIV epidemic control in California by

2025

Mission: To support principal investigators in California to develop, evaluate, and disseminate innovative research for eliminating new HIV infections; optimizing treatment uptake and outcomes for all persons living with HIV infection; and addressing the comorbidities and social determinants that threaten the health and well-being of persons vulnerable to or living with HIV infection.

Strategic Directions

- Addresses unmet needs for HIV research by prioritizing areas that are missed by other major funders.
- Supports implementation science designed to generate actionable knowledge that, when taken to scale, offers effective and costeffective approaches for stemming new infections and averting HIVassociated morbidity and mortality.
- Funds research that explains and mitigates social determinants
 associated both with inequitable access to prevention and
 treatment services and disparate health outcomes.
- Adopts a **syndemics approach** to health and disease that addresses common HIV-co-morbidities (e.g., Hepatitis C, other STIs, Mental Health and Substance Use Disorders).

Ending the HIV Epidemic: A plan for America

Goal: Reduce incident HIV infections in the U.S. by 75% within 5 years, 90% within 10 years by focusing on 48 high-burden counties (CA = 8).

Objectives:

- Diagnose all PLHIV
- Treat early and effectively
- Prevent new infections with preexposure prophylaxis
- Detect and respond rapidly to new outbreaks

California: Laying a Foundation for Getting to Zero

New HIV infections

Zero AIDS-related deaths

Stigma/Discrimination

Goals

- Reduce new HIV infections
- Increase access to care and improve health outcomes
- Reduces HIV-related disparities and health inequities
- Achieve a more coordinated statewide response to the HIV epidemic

Strategies

- PrEP utilization
- HIV testing, linkage, retention
- Care quality
- STI/HIV services integration
- Case-management services
- Insurance/benefits coverage
- Services for PWID
- HIV education
- Data quality and use
- Community involvement

How Will CHRP Support a Regional Response to Ending the HIV Epidemic in California?

California HIV/AIDS Policy Research Centers (CHPRC)

- The California HIV/AIDS Policy Center is a collaboration between UCLA's <u>Center for HIV Identification</u>, <u>Prevention and Treatment Services</u> and <u>AIDS Project Los Angeles</u>, which includes the <u>Los Angeles Gay and Lesbian Center</u> and <u>Charles Drew University</u> as subcontracting partners.
- The AIDS Policy Research Center is a collaboration between the <u>Center for AIDS Prevention Studies</u> at UCSF and the <u>San</u> <u>Francisco AIDS Foundation</u>, which included <u>Project Inform</u> as a subcontracting partner.

A Data-Driven Approach to *Getting to Zero:*Modeling Cost-Effectiveness of HIV Prevention & Treatment Strategies in California

- Launched by CHPRC in 2017, uses mathematical modeling to identify cost-effective prevention and treatment strategies with the greatest impact on the HIV epidemic in Los Angeles and San Francisco Counties.
- Extended to San Diego County, with plans for other priority counties.
- Reflects a strong collaboration among state and local departments of public health, community-based organizations, and universities (USC, UCLA, UCSF), with meaningful engagement of communities and other stakeholders.
- Seeks to inform resource allocation strategies that optimize a regional response to the HIV syndemics.
- Results are urgently needed, expected by AIDS 2020

"Much of the attention given to the epidemic has focused on national estimates and national needs.

Ultimately, however, the epidemic and its impacts, and the responses to it, are experienced in specific locales, and responses are shaped by the resources, traditions, and leadership of the specific communities."

Jonsen & Stryker (Eds.). The Social Impact of AIDS in the United States. Washington, DC.; National Academies Press, 1993.
