<p>Most new HIV infections in the United States are highly concentrated in certain geographic hotspots. More than 50 percent of new HIV diagnoses in 2016 and 2017 occurred in 48 counties, Washington, DC, and San Juan, Puerto Rico. We also know that seven states have a disproportionate occurrence of HIV in rural areas. For the first five years (Phase I), the initiative will focus on a rapid infusion of new resources, expertise, and technology into those parts of the country now most impacted by HIV (HIV.gov).</p>
