

# Examining geographical differences in the HIV care cascade among men who have sex with men in Mexico

Presenter: Angel B Algarin PhD, MPH

Co-authors: Marisol Valenzuela Lara MD, MPH, Johanna Chapin-Bardales PhD, MPH, Ricardo Baruch-Dominguez PhD, MPH, Mauricio Hernandez-Avila MD, PhD, MPH, Laramie R Smith PhD

# Introduction

In 2018, there were an estimated 230,000 people living with HIV (PLWH) in Mexico

- 79% know their status
- 72% are on ART
- 55% are virally suppressed

In an effort to reach the UNAIDS 90/90/90 goal, it remains important to examine barriers to its achievement.

Examining regional differences can shed light on intervention planning tailored to regional, historical, social, and economic contexts.

# AIM

To describe regional differences in the HIV care cascade among MSM in Mexico

# Methods

## Data

*Es entre Hombres Study*  
Self-reported data from  
N=15,889 MSM

*Similar study design to  
the American men's  
Internet Survey*

## Timeline

May-June 2017

## Recruitment

Online through Social  
Networking  
applications:

- Grindr
- Facebook
- Etc.

## Eligibility

- Cisgender male
- 18+ years of age
- History of anal/oral  
sex with another man
- Mexican Residence

# Regional Stratification

Based on the self reported state of residence, participants were stratified into the following 6 regions:

- 1) Noroeste
  - *Tijuana, Ciudad Juarez, Chihuahua*
- 2) Noreste
  - *Monterrey, Nuevo Laredo*
- 3) CDMX/EdoMex
  - *Toluca*
- 4) Centro
  - *Puerto Vallarta, Colima, Guadalajara*
- 5) Bajio/Occidente
  - *Puebla, Tlaxcala, Veracruz*
- 6) Sur/Sureste
  - *Oaxaca, Cancun, Campeche*

# HIV Care Cascade and related variables

## HIV negative

- History of HIV testing
- HIV testing in past year

## PLWH

- HIV counseling at diagnosis
- Linkage to care <1 month
- Lab results <1 month
- Accessed ART <1 month
- Currently on ART

# Analysis

Descriptive statistics  
Chi Squared tests  
Alpha=0.05

ArcGIS

Geographical depictions of  
regional differences in the HIV  
care cascade and related  
variables

# Demographics

**65.7%**

18-29 years

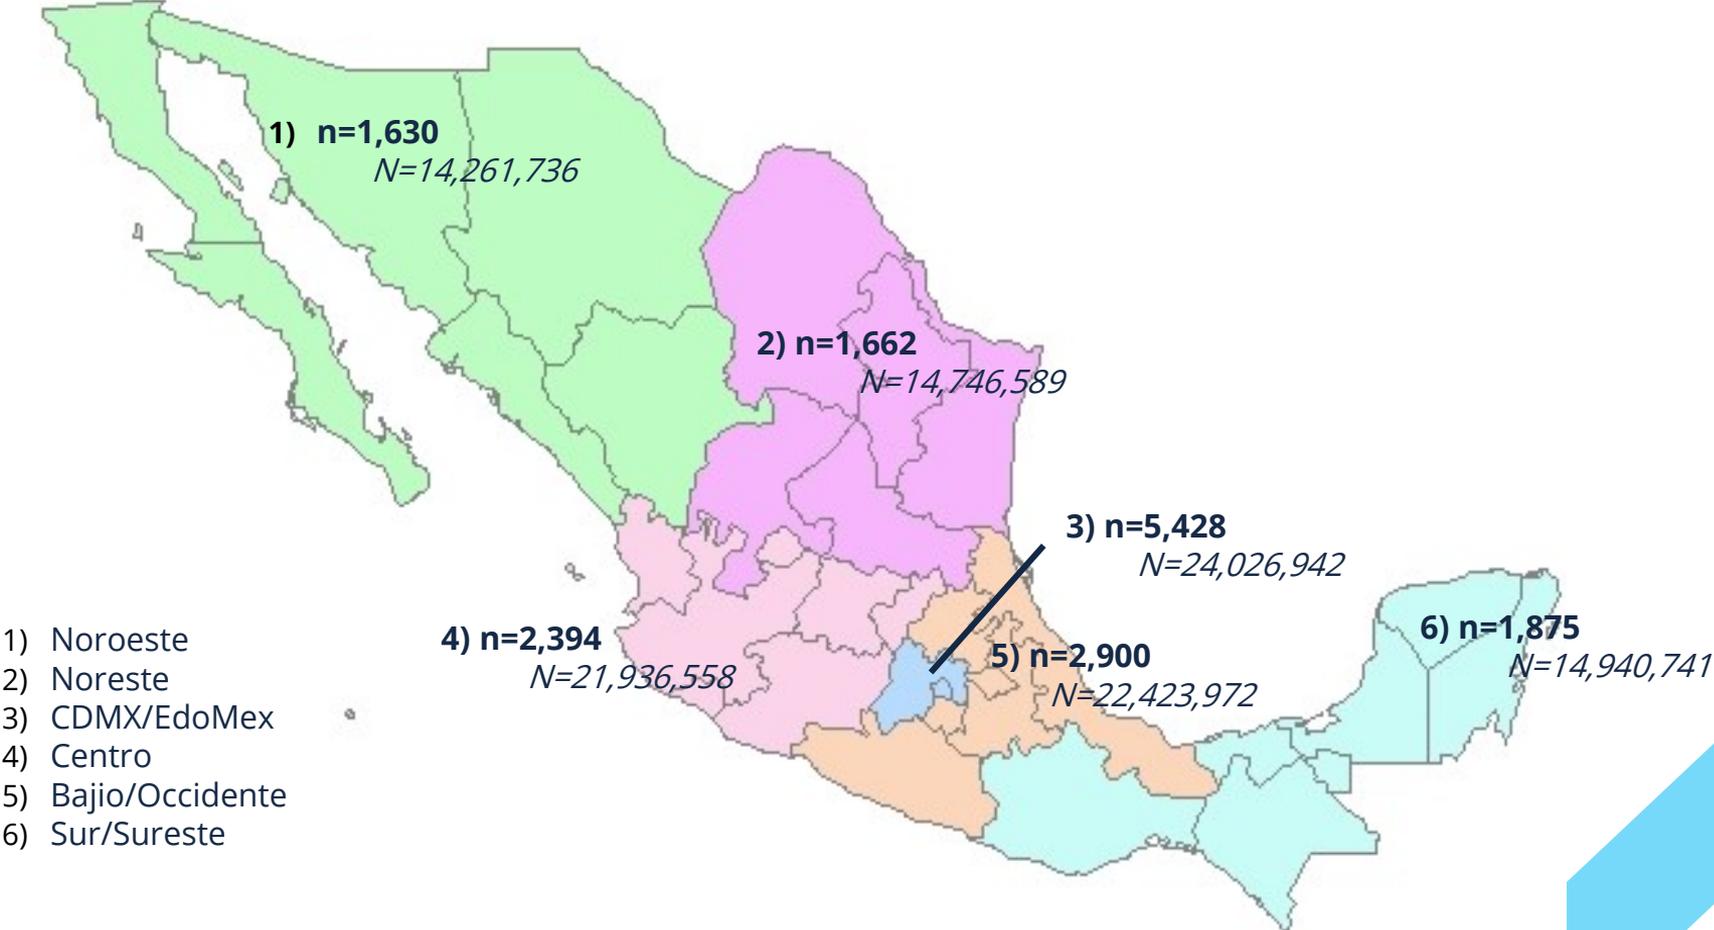

**15,889**

Total Participants

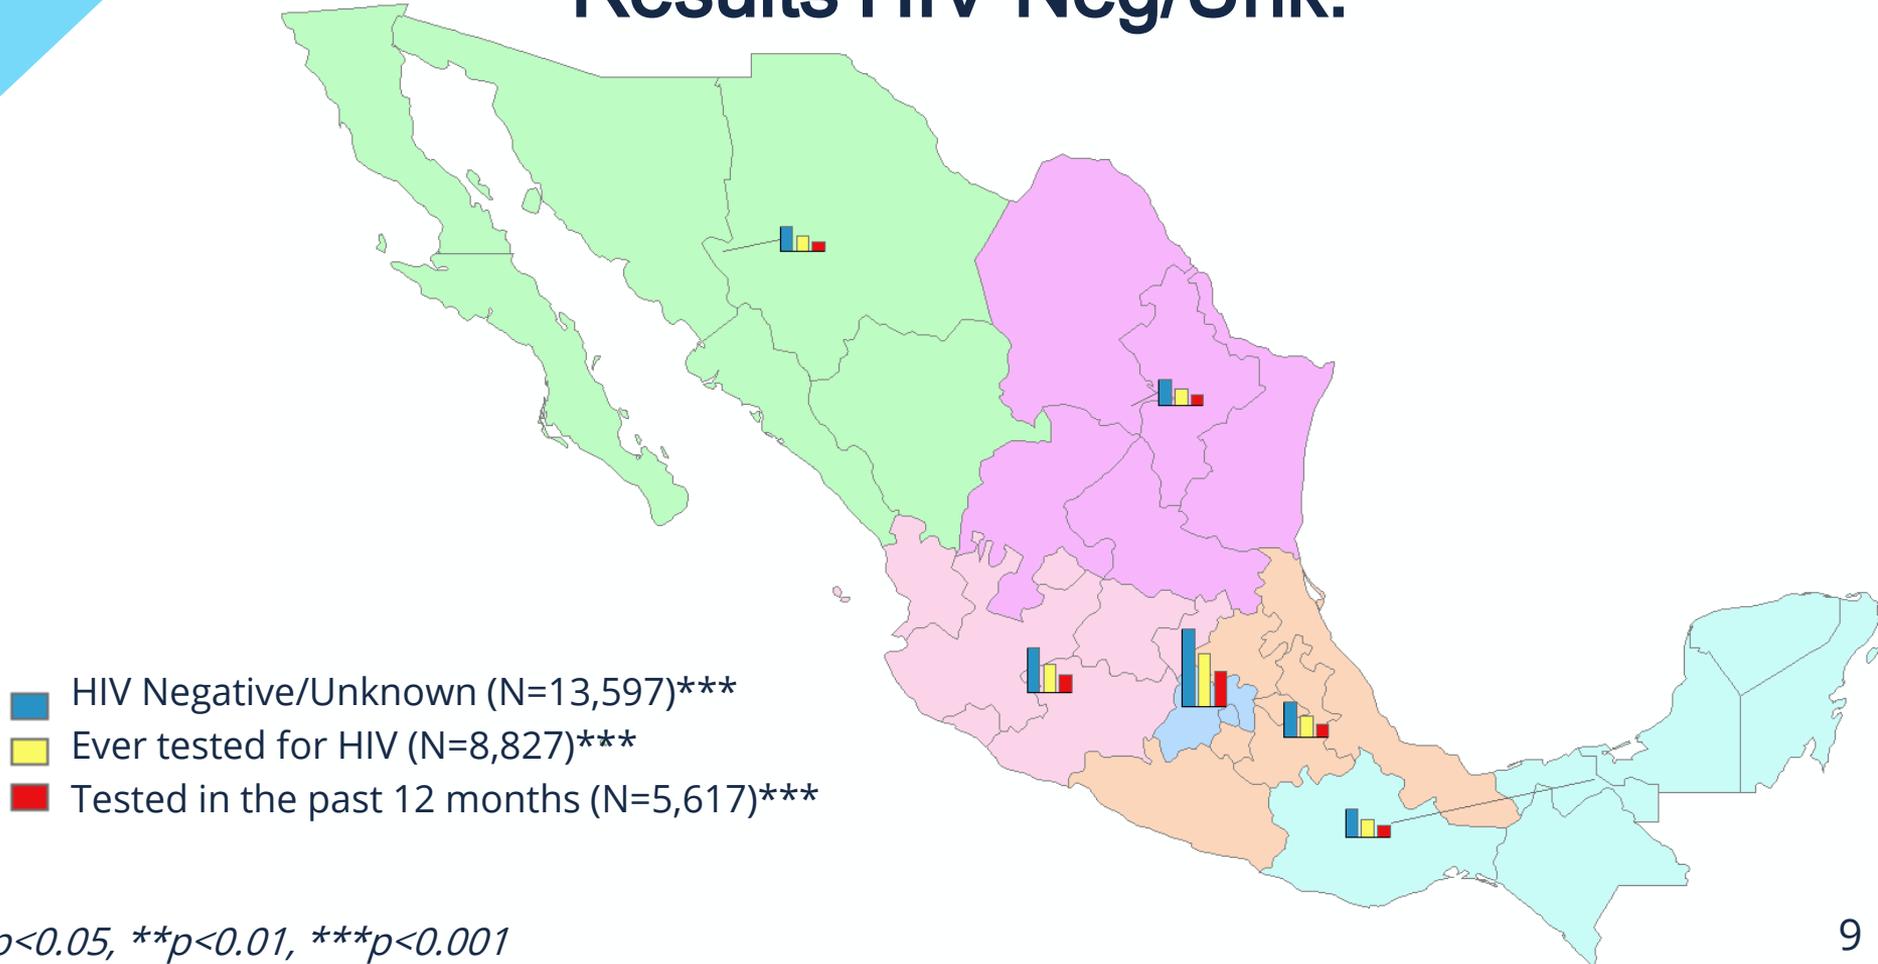

**64.8%**

≥ Technical/  
Bachelors

# Regional Stratification

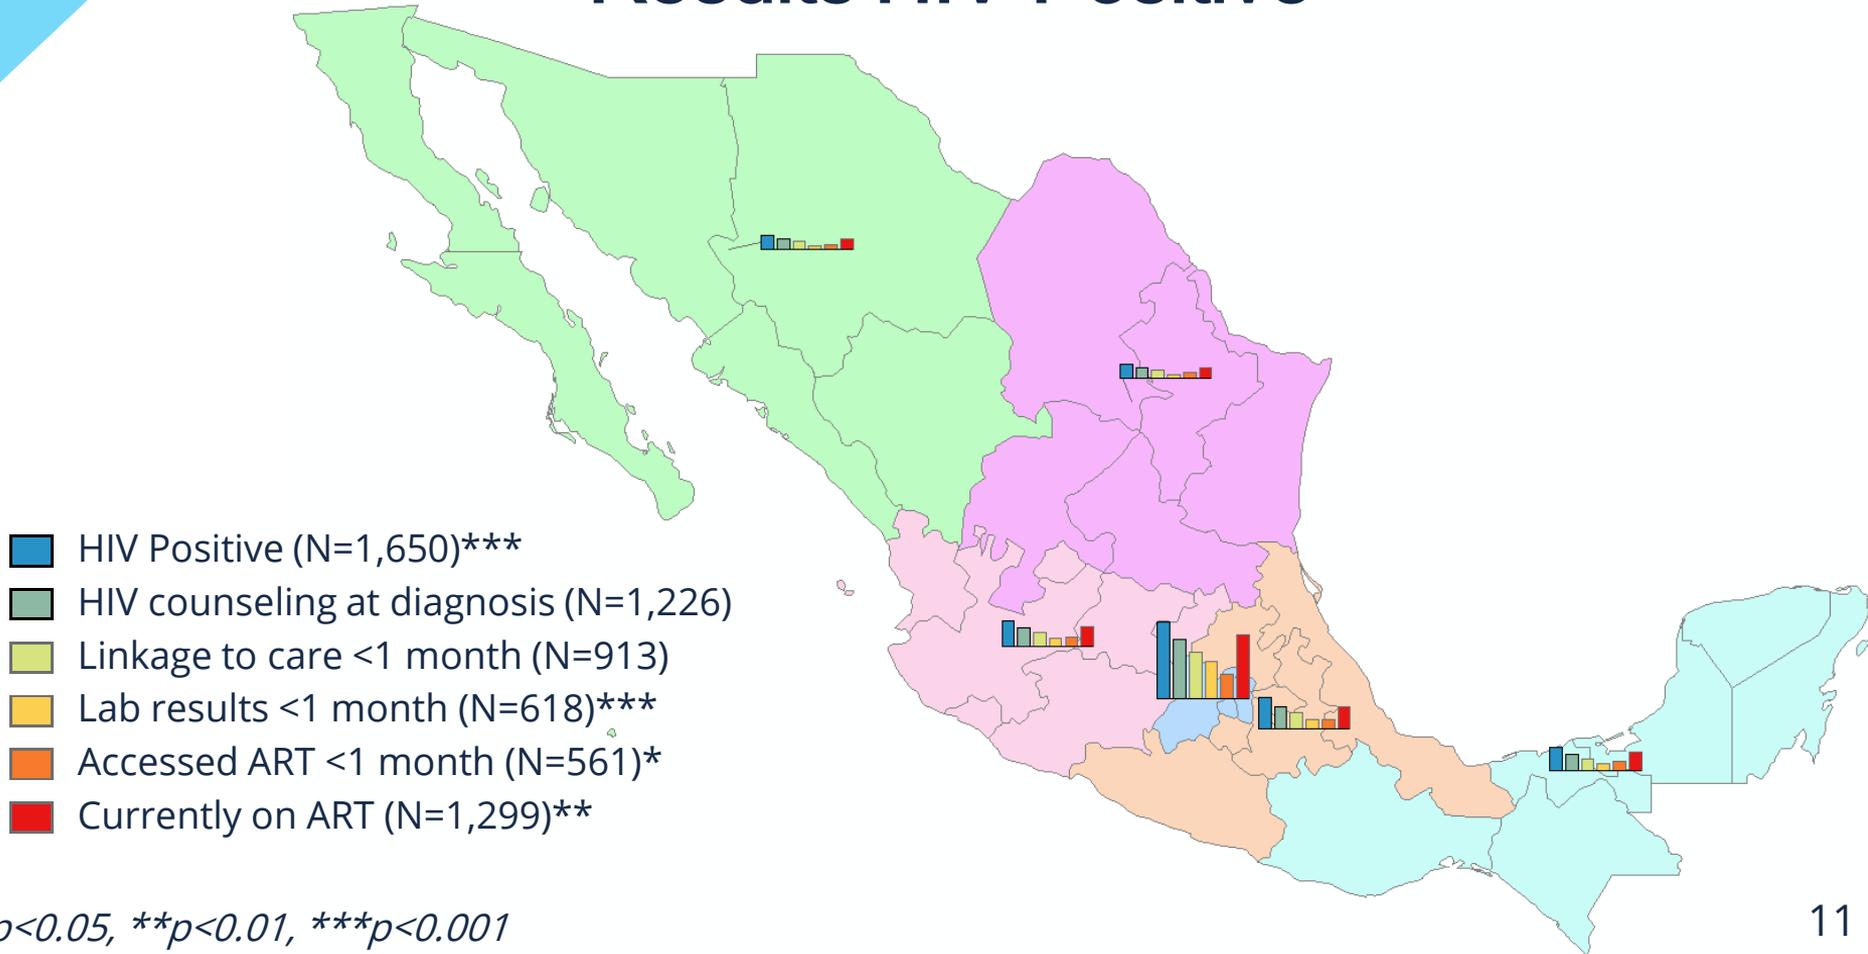

# Results HIV Neg/Unk.

# Results HIV Neg/Unk.

	Noroeste	Noreste	CDMX	Centro	Bajío	Sur
	N (%)	N (%)	N (%)	N (%)	N (%)	N (%)
HIV neg/unk.	906 (58.3)	935 (58.6)	3,101 (59.5)	1,250 (54.6)	1,607 (57.6)	1,028 (56.9)
Ever HIV Test	906 (63.4)	935 (63.4)	3,101 (68.6)	1,250 (62.2)	1,607 (62.8)	1,028 (64.3)
HIV Test 12m	546 (39.9)	587 (41.6)	2,054 (47.3)	765 (39.6)	992 (40.3)	673 (43.9)

# Results HIV Positive

# Results HIV Positive

	Noroeste	Noreste	CDMX	Centro	Bajo	Sur
	N (%)	N (%)	N (%)	N (%)	N (%)	N (%)
HIV Positive	124 (8.0)	123 (7.7)	686 (13.2)	279 (12.2)	230 (8.2)	208 (11.5)
Received Labs	36 (33.0)	32 (29.4)	331 (53.9)	84 (35.3)	78 (37.1)	57 (31.8)
Accesed ART	40 (36.0)	57 (52.3)	222 (35.8)	83 (34.9)	83 (39.7)	76 (42.0)
Current ART	95 (84.8)	97 (88.2)	571 (91.2)	196 (81.7)	182 (86.3)	158 (86.8)

# Discussion

*This is the first study to examine regional difference in the HIV care cascade among MSM in Mexico*

## 90/90/90

Not yet close

- 31.3% have unknown HIV status
- 87.7% are currently on ART

## HIV negative

Despite testing recommendations,

- 43.1% of HIV neg/unk received test in 12m
  - Low Centro (39.6%)
  - High CDMX/EdoMex (47.3%)

Lower resources, increased stigma, and accessibility issue could be driving regional disparities

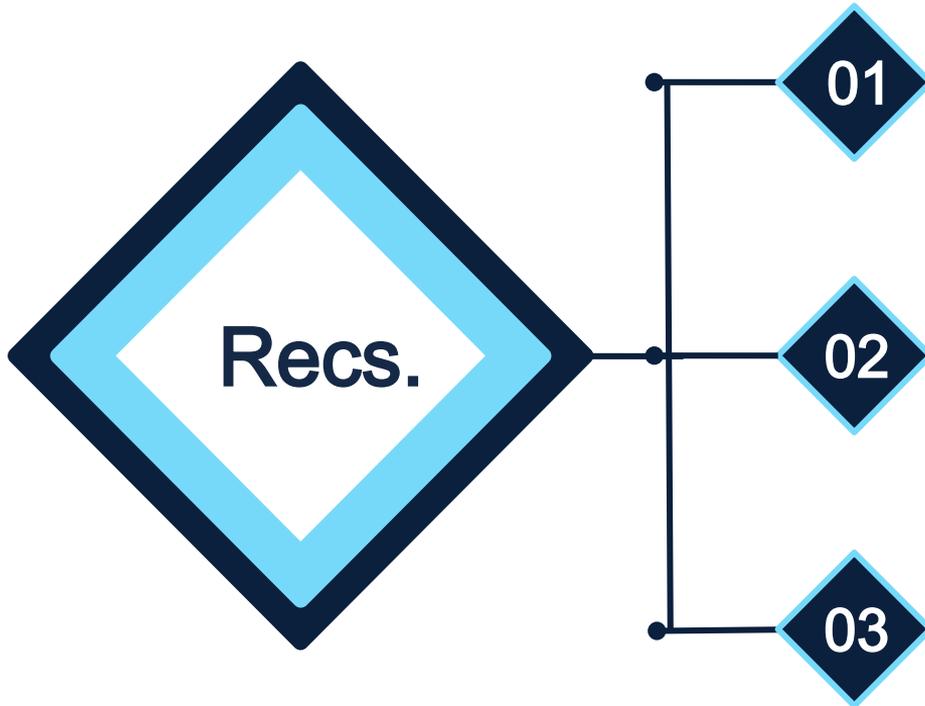

## HIV positive

HIV Labs 1m receipt

- Overall 42.4%
  - Low Noreste (29.4%)
  - High CDMX/EdoMex (53.9%)

Fragmented health system, lab processing protocols, lower resources

## Continued Surveillance

Similar NHBS/AMIS

Allows for researchers to identify trends

## Resource Distribution

Resources for HIV should be distributed in a more targeted way

## Policy

Policies surrounding lab processing, health system communication, clinic accessibility, and stigma are necessary

# Thanks
