HIV National Strategic Plan

The HIV Plan four goals:
• Preventing new HIV Transmissions
• Improving health outcomes of people with HIV
• Reducing HIV-related disparities and health inequities
• Better integrating and coordinating efforts that address the HIV epidemic among all partners and stakeholders

Priority Populations:
• MSM with an emphasis on Black, Latinx and Native American MSM,
• Black Women
• Youth
• People who inject drugs
Real People, Real Voices - I’m Ready Campaign

• GetYourPrEP.com “relaunch” on October 29
• Mail order fulfillment coming in Jan 2021
• More than 32,000 co-sponsoring pharmacies
• Working to increase program enrollment

• Trent: https://youtu.be/DD8VO4XfZvM
Viral Suppression Campaign

• The four-year campaign will:
  ▪ Bring together a diverse coalition from across the government, academic institutions, community-based organizations, and national HIV organizations;
  ▪ Address challenges and advance innovative promising models and best practices in viral suppression; and
  ▪ Focus on the EHE priority areas, including 48 counties, Washington, DC, and San Juan, Puerto Rico.

• The goal of the campaign is to:
  ▪ Increase awareness and encourage adoption of viral suppression strategies and messaging as an essential component of ending the HIV epidemic
Upcoming EHE Events

• HIV.gov has launched HIV.gov/coronavirus,

• EHE Quarterly Stakeholder Call
  January 27, 2020 2-3:30pm ET

• National Black HIV/AIDS Awareness Day Regional Activates
  February 7, 2021

Dr. Demisha Burns, Women Organized to Respond to Life-threatening Diseases (WORLD)
WOMEN ORGANIZED TO RESPOND TO LIFE-THREATENING DISEASES (WORLD): REINTRODUCING WORLD TO THE WORLD, WHERE YOU ARE NEVER ALONE!!!

Presented By
Dr. Demisha Burns, Policy & Advocacy Manager on behalf of WORLD Staff, the Leadership Institute and Ingrid Floyd, Interim Director

01/19/21
Our Mission
Women Organized to Respond to Life-Threatening Diseases (WORLD), birthed in 1991, by Rebecca Dennison, was established to improve the lives and health of women, girls, families and communities affected by HIV and other life-threatening diseases through peer-based education, wellness services, advocacy, and leadership development.

Our Vision
We envision a world where women, girls, and families affected by HIV and AIDS have the tools, support and knowledge to live healthy and productive lives with dignity. Our vision is rooted in a commitment to human rights and wellness with the understanding that this includes freedom from violence; access to housing; quality healthcare; food security; physical, spiritual and emotional wellbeing; education and economic justice.
New HIV Diagnoses Among Women by Transmission Category in the US and Dependent Areas, 2018

Most of the new HIV diagnoses among women were attributed to heterosexual contact.

*Includes hemophilia, blood transfusion, perinatal exposure, and risk factors not reported or not identified. Total may not equal 100% due to rounding.

### New HIV Diagnoses Among Women by Race/Ethnicity in the US and Dependent Areas, 2018

* Black refers to people having origins in any of the black racial groups of Africa. African American is a term often used for Americans of African descent with ancestry in North America.

† Hispanics/Latinas can be of any race.

HIV diagnoses decreased 23% among women overall from 2010 to 2017. Although trends varied for different groups of women, HIV diagnoses declined for groups most affected by HIV, including black/African American women and women aged 25 to 34.

ALTHOUGH DEATHS MAY BE TO ANY CAUSE, IN 2017, THERE WERE 4,006 DEATHS AMONG WOMEN WITH DIAGNOSED HIV IN THE US AND DEPENDENT AREAS.

HTTPS://WWW.CDC.GOV/HIV/GROUP/GENDER/WOMEN/INDEX.HTML

➢ 1 in 9 women are unaware that they are HIV positive.

➢ Receptive sex is riskier than insertive sex. Anal sex is the riskiest. (Women have a higher risk of contracting HIV than their partners.)

➢ HIV testing rates were low among women who reported having sex without a condom and having multiple sex partners. (In one study, only 20% of the women who reported having anal sex, also reported having had an HIV test.)

➢ Some Sexually Transmitted Diseases (STD’s) greatly increase the likelihood of getting or transmitting HIV.

➢ Though HIV diagnoses among women have declined in recent years, more than 7,000 women received an HIV diagnosis in the United States (US) and dependent areas c in 2018.
HIV Diagnoses Among Transgender People in the United States by Race/Ethnicity, 2009-2014

From 2009 to 2014, 2,351 transgender people received an HIV diagnosis in the United States.

Eighty-four percent (1,974) were transgender women, 15% (361) were transgender men, and less than 1% (16) had another gender identity.

Around half of transgender people (43% [844] of transgender women; 54% [193] of transgender men) who received an HIV diagnosis lived in the South.

A 2019 systematic review and meta-analysis found that an estimated 14% of transgender women have HIV. By race/ethnicity, an estimated 44% of black/African American transgender women, 26% of Hispanic/Latina transgender women, and 7% of white transgender women have HIV.
Among the 3 million HIV testing events reported to CDC in 2017, the percentage of transgender people who received a new HIV diagnosis was 3 times the national average.

Nearly two thirds of transgender women and men surveyed by the Behavioral Risk Factor Surveillance System (BRFSS) in 2014 and 2015 from 28 jurisdictions reported never testing for HIV.

Many people of transgender experience face stigma, discrimination, social rejection and exclusion.

TRANSGENDER-SPECIFIC DATA ARE LIMITED.
